**Start date for High Point 8130s after December 2020
to add the above specific requirement to PO's moving forward

Usually there should not be multiple markings on the same part. But it is possible that the highpoint "wanders" when working on the flange so that the old highpoint could be crossed.

If there is a marking available already, MTU relies on that marking. No need to issue a new one.

Highpoint will be noted on 8130
