

Greetings, Product Line Team:

It's been a week since we introduced the Catalog Management tool in Concourse.

A huge thank you to those that have logged into Concourse and checked out Parts Catalog. In reviewing the activity report, there's still some of you that need to access the tool for the first time.

**Actions Required:**

1. Sign into Concourse. Is your access working okay? Does the home page load?
2. Review the data in the Parts Catalog for your OEM's / FSC's. Does the information loaded look correct? Does any information seem to be missing?
3. Use the sort, filter, and search functionality in the tables. Are there any issues you encountered?

A reminder that the site is live but read-only at this point, so there is nothing you can do to "break" it!

If you have not done so already, please do this before the end of the week; advise immediately of any issues or difficulties in signing in!

Many thanks,

Annica.
